

FlyRank Portfolio Writing Assignment

Voice Card

Direct, friendly, simple, honest, no buzzwords.

TalentScan AI - Problem

Recruiters spend significant time reviewing resumes manually. I built an AI-powered system to automate resume screening and rank candidates based on job descriptions.

TalentScan AI - What I Did

Developed TalentScan AI using Python, FastAPI, React, NLP, TF-IDF, and Cosine Similarity. Integrated frontend and backend and implemented an AI chatbot.

TalentScan AI - Outcome

The project demonstrates how AI can support recruitment by reducing manual effort and providing consistent resume ranking.

Sign Language Recognition - Problem

Communication barriers exist for people with hearing and speech impairments.

Sign Language Recognition - What I Did

Built a real-time sign language recognition system using Python, OpenCV, and deep learning.

Sign Language Recognition - Outcome

Improved my understanding of computer vision and practical AI applications.

Bio

I am a Computer Science student passionate about Artificial Intelligence, Machine Learning, and software development. I enjoy building practical AI solutions for real-world problems.

Contact CTA

Interested in collaborating or discussing AI projects? Feel free to connect with me through LinkedIn, GitHub, or email.

Before (Generic AI)

I am a results-driven software developer passionate about technology and innovation.

After (Edited Version)

I enjoy building AI projects that solve practical problems. Every project helps me learn new technologies while improving my software development skills.
